

A Comprehensive Wayfinding Solution for an Upscale, Urban Safari

The Nia Center's conference area features 25 meeting rooms, including a 17,200 sq. ft. grand ballroom, two 3,500 sq. ft. junior ballrooms, four unique African hut-inspired meeting rooms and an executive conference center. The Nia Center required a comprehensive signage solution that would integrate seamlessly into its African-themed environment, distinguish The Nia Center brand, and reflect the center's overall commitment to technology and business productivity. The desired solution would provide a comprehensive wayfinding program to provide directional assistance to guests.

Service Offerings

- Design Integration
- Planning
- Wayfinding
- Fabrication
- Installation

Product Applications

- Pacific Interior™, modular signage system
- Custom exterior halo-lit logos
- Dimensional letters

About the Solution

ASI was enlisted to provide a comprehensive wayfinding solution that included interior directional and ADA-Ready™ signs, and exterior illuminated dimensional letters. Services included a complete design, fabrication, and installation. The client's goal was to have a total signage solution that complements the African theme through color and stylized graphic elements. ASI chose to use its modular, curved-face sign system, Pacific Interior to complement architectural features and meet the wayfinding needs of the center.

The interior signs include large facility maps, directionals, ADA-Ready™ room and restroom signs, projecting signs and dimensional letters. The exterior signs include two halo-lit logos that provide a powerful yet refined large-scale identification at night.
