

Durable, Contemporary Extruded Aluminum Signage System

Venus is a durable, flat-face extruded aluminum signage system designed for interior environments. The Venus system is comprised of an anodized aluminum extrusion body, an optional design accent bar and insert options that provide a flexible system with a distinguished look. The system offers more than 40 pre-defined standard sign sizes, from directional signs to name plates. Venus includes ADA-Ready™ panels and graphic panels, and is available with a variety of finish applications ranging from standard anodized colors to ASI's 140 standard paint finishes.

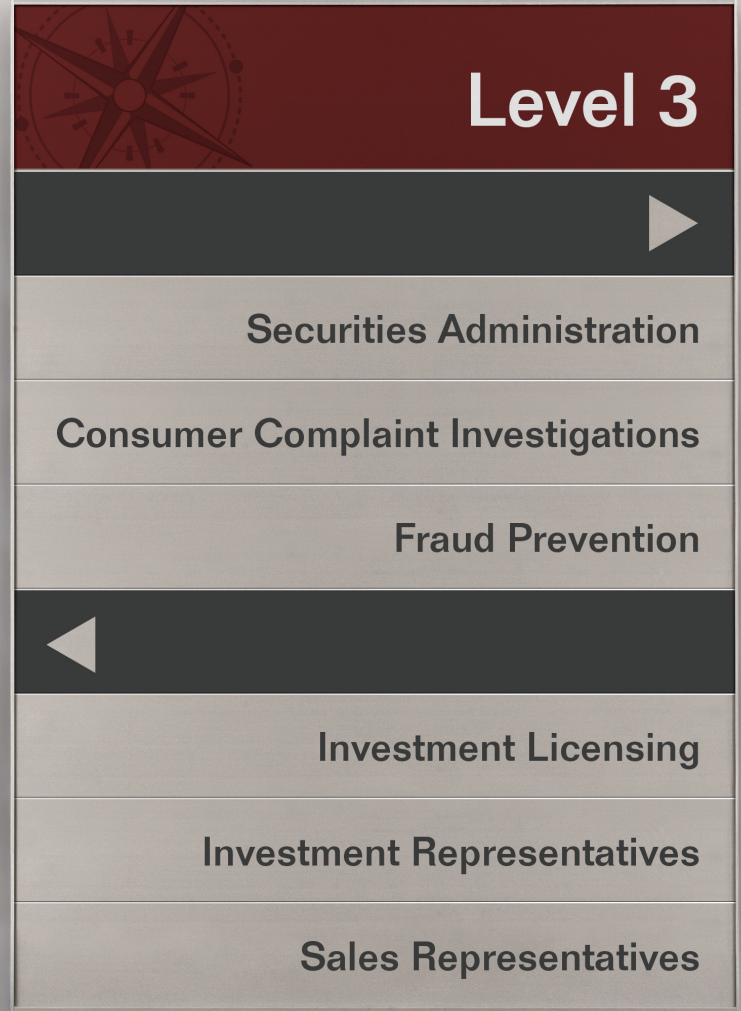

Architects and designers can create customized designs, using interchangeable design elements, while retaining all of the practical functions of a modular wayfinding system. This enables the Venus system to achieve an almost unlimited scope of customized design possibilities.

Additionally, Venus is made from materials which can be easily recycled at the end of the life of the sign.

- Flat-face interior sign system with changeable inserts
- Aluminum extruded frame construction with removable end caps and insert panels
- Pre-defined sign types and sizes make creating an interior solution easy
- Select from five standard anodized accent colors or 140 standard paint colors

The flexibility and longevity of Venus promotes sustainability by allowing updates to the message panels, as necessary, without replacing entire signs. Venus is also recyclable at the end-of-life.

Extrusion Signage Solutions

Standard Features

- Interior flat-face modular system based on an extruded anodized aluminum housing
- Changeable insert areas can hold ADA-Ready™ or graphic panels, paper or digital graphic inserts
- Paper inserts protected by matte acrylic cover
